

Air Switch Isolated Power Adaptor - VIS-AIR-TS27

The VIS-AIR-TS27 Air Switch Isolated Power Adaptor is a controller and air button system which is suitable for all brands of waste disposal units including models of Insinkerator, Waste Maid, Waste King, Titan, Franke, etc. No complicated wiring or trailing cables – simply plug the control unit into a 13A socket and your waste disposal unit into the socket on the control unit. The unit allows switching with complete isolation so the push button can be fitted in areas of high humidity with complete isolation from the power. The Air Switch toggles - press once to switch on and again to switch off. The button is faced in polished chrome and fits into a 32mm diameter hole, 65mm height and outer diameter of 47mm supplied with 980mm of pipe. To install the switch just pull off the pipe, remove the nut and washer, drop the switch into a 32mm hole (either already in many sinks, covered with a blanking plate) or create a hole in the sink or work surface. Fit the air button into the hole and fit the washer and nut hand tight. Refit the air pipe; plug the adaptor into a 13A socket and the waste disposal unit in the adaptor and the system is ready for use.
